Sequence 23, Application PC/TUS0209551
Sequence 23, Application PC/TUS0209551
GENERAL INFORMATION:
APPLICANT: SYNERGY PHARMACEUTICALS
TITLE OF INVENTION: GUANYLATE CYCLASE RECEPTOR AGONISTS FOR THE TREATMENT
TITLE OF INVENTION: OF TISSUE INFLAMMATION AND CARCINOGENESIS
FILE REFERENCE: 81361/141030
CURRENT PELLION UMBER: PCT/US02/09551
CURRENT PELLION DATE: 2002-03-28
NUMBER OF SEQ ID NOS: 23
SEQ ID NO 23

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Conjugated cpds. which specifically bind to colorectal cancer cells comprise heat-stable toxin receptor binding moiety and active moiety which may be a therapeutic agent or a radioactive agent.

Claim 3; Page 116; 133pp; English.

New conjugated compounds are provided which consist of (1) an ST receptor binding moiety and (2) an active moiety which is a radio- stable agent. 'ST refers to a heat stable toxin produced by E.coli and other organisms. Especially the radiostable agent is a therapeutic agent (e.g. methotrexate, doxorubicin, mitomycin), imaging agent (e.g. radioactive isotope) or nucleic acid; and the compound is used for the detection, imaging or treatment of colorectal tumours, particularly metastasised tumours. The present sequence is a specific example of an ST receptor binding peptide which can be used in the conjugate

Sequence 19 AA;

```
The specification describes a method for increasing the number of heat stable toxin (ST) receptor molecules on the surface of a metastasised colorectal cancer cell. The method comprises administering, by continuous infusion, at least 0.1 mW of an ST receptor ligand per 10 kg bodyweight per hour for at least 6 hours, where ST receptor ligand molecules bind to ST receptors on the surface of the cancer cell in the individual and the commber of ST receptors can then be used to inhibit proliferation of the colorectal, creceptors can then be used to inhibit proliferation of the colorectal, gastric and oesophageal cells. This method may be used for treating individuals that have diseases that affect colorectal, gastric and cosophageal cells, including colorectal, gastric or oesophageal cancers.

The present sequence represents a ST, designated ST Ia, which is used as the ST receptor ligand in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gastrointestinal; antiinflammatory; laxative; cardiant; antiulcer; anorectic; cardiovascular; cytostatic; antiemetic; nespiratory; neburoprotective; vasotropic; auditory; antiemetic; antiasthmatic; nephrotropic; virucide; immunosuppressive; antiallergic; antidabetic; ophthalmological; tranquiliser; hypnotic; nootropic; guanylate cyclase C; GC-C; receptor; gastrointestinal disorder; irritable bowel syndrome; constipation; gastrointestinal disorder; hearburn; dyspepsia; gastroparesis; Crohn's disease; incrative colitis; inflammatory bowel disease; obesity; heart failure; cystic fibrosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a conjugated compound that comprises a ST (heatstable toxin) receptor moiety selected from one of the sequences shown in ANAVGOSOB-Y40559 and an active moiety (entisense molecule). The compound is useful for the treatment of colorectal cancer. The use of the conjugated compound is advantageous compared to antibodies since it binds specifically to colorectal cells and has no toxic effect on normal cells. The present sequence represents the amino acid sequence of a ST receptor peptide ST la
                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Conjugated compound; ST receptor; heat-stable; toxin; colorectal cancer.

The invention relates to a purified peptide (P1) capable of activating the guanylate cyclase C (GC-C) receptor. Further disclosed is a pharaceutical composition comprising the peptide of the invention. The composition comprising the peptide of the invention. The composition of the invention is useful for treating a gastrointestinal disorder; discrete is gastrointestinal motility disorder, considering the plant of the invention is useful for treating gastrointestinal disorder, gastroesophageal reflux disease, functional gastrointestinal disorder, gastroesophageal reflux disease, functional constitution, crohn's disease, ulcerative collitis or inflammantory bowel disease. The peptide of the invention is also useful for treating constitution, crohn's disease, ulcerative collitis or inflammatory bowel conserved to construction, crohn's disease, ulcerative collitis or inflammatory bowel conserved to conserve disease, ulceration is also useful for treating converting the proposition of the invention is also useful for treating converting the conserved disorder. Plantacipation, insulin-related disorder with carbonate imbalance, erectile dysfunction, insulin-related disorder or conserved morphying. Plus useful in relaving symptoms of gastroparesis such as nausea, voniting, bloating, and delayed gastric emptying. Plus useful in relaving symptoms of gastroparesis conserving an englitus, hyperglyceamia, respirating or preventing retinopathy and edems formation. Plus useful for treating or preventing repropathy negatesis, anxiety, aleeg disorders and memory loss. Plus useful as a marker to identify, decet, stage, or diagnosis diseases and conditions of the small intestine, including Ccohn's disease, colitis, inflammatory conserved in trangeting and specific cells bearing doc diagnosis or the conserved collection or lacal colorectal for versating or treating or treating colorectal for intestine to add in imaging and diagnosing or treating colorectal for each or local colorectal for where the specific cells bearing documents
cancer; respiratory disorder; neurological disorder; carbonate imbalance; exectile dysfunction; inner ear disorder; slow digestion; nausea; vomiting; bloating; asthma; nephritis; hepatitis; pancreatitis; allergy; retinopathy; nephropathy; nation and an an arxiety; sleep disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             represents a bacterial ST peptide which is an activator of the GC-C
receptor. ST peptides are considered super agonists of GC-C and are very
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel purified peptide capable of activating the guanylate cyclase (receptor, useful for treating obesity, congestive heart failure and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          resistant to proteolytic degradation.

New conjugated compounds are provided which consist of (1) an ST recepto binding molety and (2) an active moiety which is a radio- stable agent.
'ST refers to a heat stable toxin produced by E.coli and other organisms. Especially the radiostable agent is a therapoutic agent methotrexate, doxorubicin, mitomycin), imaging agent (e.g. radioactive isotope) or nucleic acid; and the compound is used for the detection, imaging or treatment of colorectal tumours, particularly metastasised tumours. The present sequence is a specific example of an ST receptor binding peptide which can be used in the conjugate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Conjugated cpds. which specifically bind to colorectal cancer cells -comprise heat-stable toxin receptor binding moiety and active moiety which may be a therapeutic agent or a radioactive agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gapa

The invention relates to a conjugated compound that comprises a ST (heatstable toxin) receptor moiety selected from one of the sequences shown in AAY40508-Y40559 and an active moiety (antisense molecule). The compound is useful for the treatment of colorectal cancer. The use of the conjugated compound is advantageous compared to antibodies since it binds specifically to colorectal cells and has no toxic effect on normal cells
                                                                                        The invention relates to a conjugated compound that comprises a ST (heatstable toxin) receptor moiety selected from one of the sequences shown in AAY40508-Y40559 and an active moiety (antisense molecule).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New conjugated compounds are provided which consist of (1) an ST receptor binding moiety and (2) an active moiety which is a radio- stable agent.

ST refers to a heat stable toxin produced by E.coli and other organisms. Especially the radiostable agent is a therapeutic agent (e.g. methotrexate, doxorubicin, mitomycin), imaging agent (e.g. radioactive isotope) or nucleit acid; and the compound is used for the detection, imaging or treatment of colorectal tumours, particularly metastasised tumours. The present sequence is a specific example of an ST receptor binding peptide which can be used in the conjugate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Conjugated compound; ST receptor; heat-stable; toxin; colorectal cancer.

The specification describes a method for selecting a candidate drug compound having affinity for biological receptors. The method uses a combination of rational and combinatorial drug design techniques. At least I residue in the original cell receptor binding peptide is modified to a non-natural amino acid, preferably a beta turn mimetic, a gamma-turn mimetic, a beta sheet mimetic or a disulphide bridge mimetic. The method is used for identification of a candidate receptor antagonist or agonist. The present peptide is a cell receptor binding peptide, and can thus be used as a starting point for identification of candidate drug compounds, used as a starting for identification of candidate drug compounds.
                                                                                                                                                                                                               Method of drug selection - and use of an acetamidomethyl-protected polymer as a substrate in the solid state synthesis of an oligopeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Macrocyclic complexing agents containing linked 2,6-pyridinylene nuclei as components of targeting immunoreagents binding to ST receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Heat stable ST enterotoxin; immunoreagent; radiological therapy; diagnosis; ST receptor binding moiety; macrocyclic complexing agent; tumour; infectious diarrhoeal disease; diarrhoea.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a conjugated compound that comprises a ST (heat-stable toxin) receptor moiety selected from one of the sequences shown in AAY40508-Y40559 and an active moiety (antisense molecule). The compound is useful for the treatment of colorectal cancer. The use of the conjugated compound is advantageous compared to antibodies since it binds specifically to colorectal cells and has no toxic effect on normal cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Selection, candidate drug, cell receptor binding; affinity, biological receptor, rational drug design, combinatorial drug design, receptor antagonist; receptor agonist; ST enterotoxin; beta turn mimetic; gamma-turn mimetic; beta sheet mimetic; disulphide bridge mimetic.
                                                                                                                                                                                                           Conjugated compound; ST receptor; heat-stable; toxin; colorectal cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 compound comprising a receptor molety and active molety, the treatment/prevention of colorectal cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Comprising a metal ion and a residue of a macrocylic complexing agent (MCA). Ti's are of use in diagnostic imaging and therapy of specific disease sites in a patient, using either radioactive, magnetic resonance, or fluorescent means of detection or use of the metal ion; alternatively, a substituent of these types may be introduced, e.g. radioactive iodine, co perform the same function. Most notable is the imaging and coline, correction therapy of tumours. In addition, a variety of bacteria, including Escherichia coli, vibrio cholerae, Citrobacter freundii, and corrected diseases, particularly in pediatrics and cause infectious diarrhoeal diseases, particularly in pediatrics and in developing countries. These types of diarrhoea can also be treated using TI's. TI's may specifically used to treat cancers and also be used as an antidiarrhoeal agent of trea free from the various disadvantages of prior art reagents, including rapid destruction and/or excretion, instability in storae, and protein degradation. There is no perturbation of protein reactive groups at the pyridyl chelating site. AAX29607 to camplification of the present invention
                            present invention describes targeting immunoreagents (TI's)

Method of drug selection - using a combination of rational and combinatorial drug design techniques.

Disclosure, Page 1, 35pp, English.

The specification describes a method for selecting a candidate drug compound having affinity for biological receptors. The method uses a combination of rational and combinatorial drug design techniques. At least 1 residue in the original cell receptor binding peptide is modified

```
ö
to a non-natural amino acid, preferably a beta turn mimetic, a gamma-turn mimetic, a beta sheet mimetic or a disulphide bridge mimetic. The method is used for identification of a candidate receptor antagonist or agonist. The present peptide is a cell receptor binding peptide, and can thus be used as a starting point for identification of candidate drug compounds, using the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     anorectic, cardiovascular, candidatic, analgesic, CNS, respiratory, neuroprotective; vasotropic, auditory; antiemetic, antiathmatic; neuroprotective; vasotropic, auditory; antiemetic, antiathmatic; neuroprotective; vasotropic, virucide; immunosuppressive; antiallergic; antidabetic; ophthalmological; tranquiliser; hypnotic; nootropic; guanylate cyclase C; GC-C; receptor; gastrointestinal disorder; irritable bowel syndrome; constipation; gastroseophageal reflux disease; laritable bowel syndrome; constipation; gastroseophageal reflux disease; inflammatory bowel disease; obseity; heart failure; cystic fibrosis; cancer; respiratory disorder; neurological disorder; carbonate imbalance; erectile dysfunction; inner ear disorder; slow digestion; nausea; vomiting; bloating; asthma; nephritis; hepatitis; pancreatitis; allergy; retinopathy; nephropathy; sleep disorder.

The invention relates to a purified peptide (PI) capable of activating to the guanylate cyclase C (GC-C) receptor. Further disclosed is a pharmaceutical composition comprising the peptide of the invention. The composition of the invention is useful for treating a gastrointestinal composition of the invention is useful for treating PI, where the disorder in a patient, which involves administering PI, where the gastrointestinal disorder intestinal disorder constitation, ronder and disorder constitation, ronder gastrointestinal disorder constitation, ronder gastrointestinal disorder. Consent gastrointestinal disorder constitation, rongestive heart failure, cystic fibrosis or a patient suffering cancer, respiratory disorder. Plis useful in relating symptoms of gastroparesis concert manager. Plis useful in relating symptoms of gastroparesis concert and saughant of preventing symptoms of gastroparesis concert in diabetes mallitue, bypesilycamia, respiratory disorder malerion. Plis useful for treating or preventing type II diabetes mallitue, hypesilycamia, respiratory disorder including inhalation. Plis useful in treating or preventing concert including inhalation. Plis useful for treating or preventing concert including inhalation. Plis useful stander conjugated to diagnosis disease, then an antient of the disorder and disease, tumours etc. Plis useful for treating or preventing confidence of the same lessons and specific cells hearing GC-C receptor, e.g., cystic consental measured beacher, each conjugated to diagnosis of the conjug
                                                                                                                                                                                                                                                Novel purified peptide capable of activating the guanylate cyclase C receptor, useful for treating obesity, congestive heart failure and benign prostatic hyperplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 resistant to proteolytic degradation.
                                                                                                                                                                                                                                                                                                                                                 Disclosure; Page 28; 93pp; English.

Novel purified peptide capable of activating the guanylate cyclase C receptor, useful for treating obesity, congestive heart failure and benign prostatic hyperplasia.

Disclosure; Page 29; 93pp; English.

The invention relates to a purified peptide (P1) capable of activating the guanylate cyclase C (GC-C) receptor. Further disclosed is a pharmaccutical composition comprising the peptide of the invention. The composition of the invention is useful for treating a gastroincestinal disorder is a patient, which involves administering P1, where the captorinestinal disorder is gastrointestinal motifility disorder. In the invention is useful for treating P1, where the castroincestinal disorder is gastrointestinal motifility disorder. In the invention is a functional castroincestinal disorder, gastroopshages in feltura disease, functional dyspepsia, nonlicer dyspepsia, functional dyspepsia, nonlicer dyspepsia, constitution, clonic pseudocobstruction, crompstruction, crompstruction adisease. The peptide of the invention is also useful for treating disease. The peptide of the invention is also useful for treating for constitution, the P1/GC-C receptor agonist is useful for treating crompstruction. The P1/GC-C receptor agonist is useful for treating crompstruction. The P1/GC-C receptor agonist is useful for treating crompstruction. The P1/GC-C receptor agonist is useful for treating crompstruction, insulin-related disorder with castronate imbalance, erectile dysfunction, insulin-related disorder crompstruction, respiratory disorder. Pi su useful in relating symptome of gastric emptying. Pl is useful in treating or preventing cueful for treating or preventing crompstruction, insuling inhalation. Pl is useful for treating or preventing crompstruction and consist is an endomed conficient of the small intestine, including crompstruction conficient of the small intestine, including crompstruction conficient of the small intestine, including crompstruction conficient molecule to target cells bearing GC- croeptor, erg. cyptic cibrosis lesions and specific cells lining the intesting crompstructure collected, many and dispense or language of the small intestine, including cells lining or treating crompstruction colorcetal/metassised

receptor. ST peptides are considered super agonists of GC-C and are very resistant to proteolytic degradation. ខ្លង្គមូន

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 2, P
